Ensuring quality measures contribute value through improved quality of care requires:

**Choosing the Right Quality Measure**
- Quality measure type and scope can be extensive as there is typically more than one quality measure around each measurable health care entity.

**Ensuring Accuracy**
- Accurate data analysis, monitoring, and interpretation are necessary to inform performance improvement plans and ensure that measures contribute to improvements in quality of care.

**Minimizing Burden**
- Educating and engaging providers in the proper use and value of quality measurement is crucial to allowing clinicians more time with their patients and reducing burden.

RTI’s experts can help you with any stage of quality measurement:

**Selection & Development**
- RTI’s experts can help determine the right quality measures to help you achieve your quality goals.
  - Guide your team in identifying quality measures that meet your specific quality objectives
  - Help your organization create a data collection plan that minimizes provider burden
  - Partner with providers and experts to develop accurate measures

**Data Analysis, Monitoring, & Interpretation**
- RTI’s experts can analyze data trends and help you identify next steps.
  - Assist with interpreting and monitoring quality measure data
  - Provide data analysis to identify how quality performance can be improved
  - Monitor the performance of quality measures to be sure they continue to meet high scientific standards

**Implementation & Education**
- RTI’s experts can educate and support providers—maximizing the impact of quality measurement.
  - Educate providers on quality measure and payment model changes to improve implementation
  - Facilitate high quality data collection and understand the landscape of provider experiences with quality measurement through timely help desk support
  - Engage stakeholders in conversation to improve their knowledge of and support for quality measurement

**Evaluation & Reporting**
- RTI’s experts can help contextualize your data and enable meaningful comparisons at the provider, state, and national level.
  - Empower providers and patients through transparency
  - Identify or establish appropriate quality benchmarks
  - Create provider incentive programs
  - Provide valuable insights to facilitate and maintain accreditations and certifications
  - Assist with reporting on quality measures in alignment with payer requirements
